

Lite Configuration File

To modify Lite, open `TMSSLite.cfg` in a plain text editor such as Notepad.

`TMSSLite.cfg` can be found in the TapeTrack/Lite install directory (default `C:\Program Files\TapeTrack\TapeTrack Lite`).

Remove Slot Level Display

Locate the section **variables**

```
TMSSMaster.cfg - Notepad
File Edit Format View Help
options = {
    //
    // When exporting data to email send to the following addresses
    //
    email = [ "emailto1@tapetrack.com", "emailto2@tapetrack.com" ];

    /*
    variables = {
        TMSSLEVELNAMES = "A,B,C";
    };
    */

    showparent = true;
};

defaults = {
```

Remove comment tags `/*` & `*/` from above and below variables.

Change the line of code

`TMSSLEVELNAMES = "A,B,C";`

to

`TMSSNOLEVELSLOT = "true";`

 TMSSMaster.cfg - Notepad
File Edit Format View Help

```
options = {  
    //  
    // When exporting data to email send to the following addresses  
    //  
    email = [ "mailto1@tapetrack.com", "mailto2@tapetrack.com" ];  
  
    variables = {  
        TMSSNOLEVELSLOT = "true";  
    };  
  
    showparent = true;  
};  
  
defaults = {
```

and save file.

Make sure that you have sufficient rights to save file to directory and to save as TMSS10Master.cfg and not as a text file or other file extension.

If when opening TapeTrack Lite you receive an error - **Failed to read configuration file (TMSSLite.cfg): Line() - Syntax error** check the configuration file that you have used plain ASCII quotes (" ") and not rich text quotes (" ") and that the replaced text is correct.
