Lite Configuration File

To modify Lite, open `TMSSLite.cfg` in a plain text editor such as Notepad.

TMSSLite.cfg can be found in the TapeTrack/Lite install directory (default `C:\Program Files\TapeTrack\TapeTrack Lite`).

The config file has comments throughout the code to either disable the execution of unused code blocks or add explanation to the available functions.

Block quotes look like /* */, anything between these characters are treated as comments and not code.

Anything after the characters // are treated as comments and not code for that line.

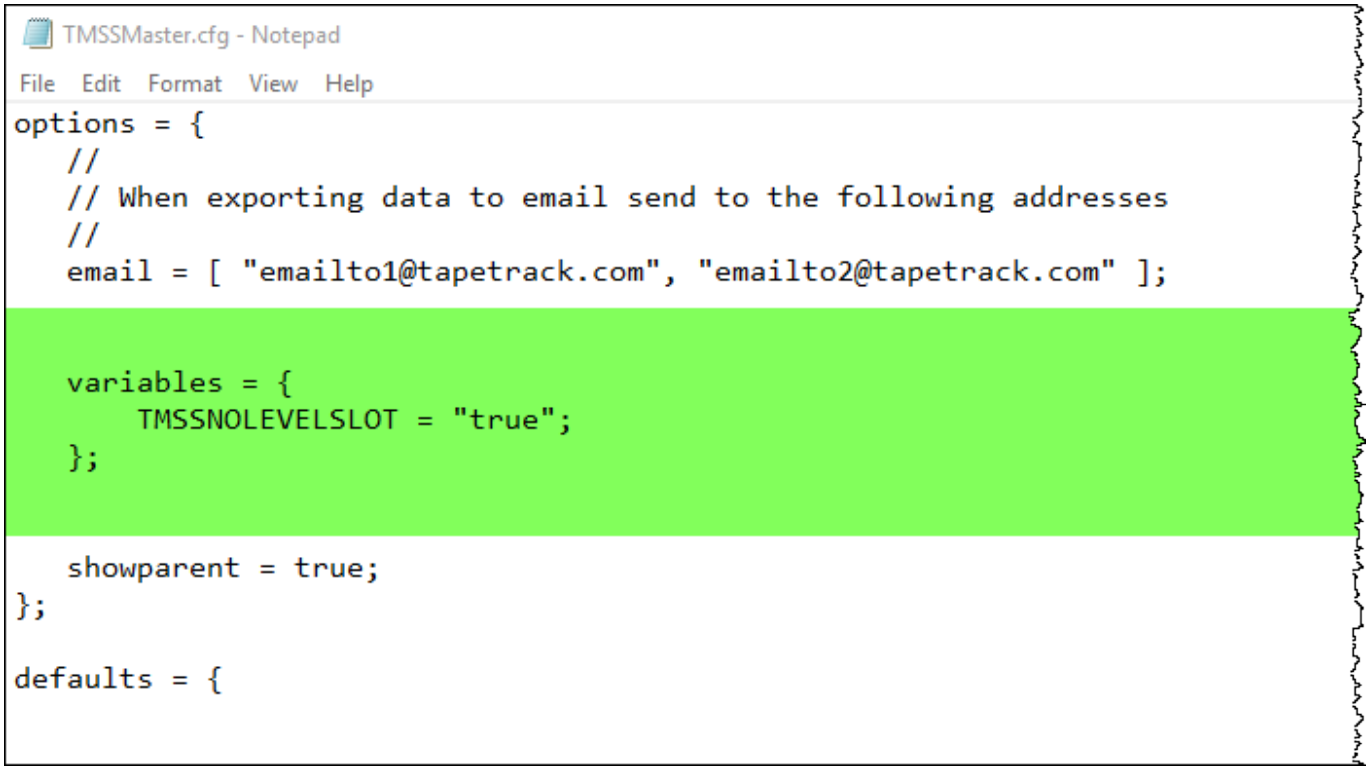

Remove Slot Level Display

Locate the section **variables**

Remove comment tags /* & */ from above and below variables.

Change the line of code
TMSSLEVELNAMES = “A,B,C”;
to
TMSSNOLEVELSLOT = “true”;

and save file.

Make sure that you have sufficient rights to save file to directory and to save as TMSS10Lite.cfg and not as a text file or other file extension.

If when opening TapeTrack Lite you receive an error - **Failed to read configuration file (TMSSLite.cfg): Line( ) - Syntax error** check the configuration file that you have used plain ASCII quotes (“ ”) and not rich text quotes (“ ”) and that the replaced text is correct.
