

Deleting Volumes

You must have **Alter** rights to delete volumes

Select the required **Volume**, or range of **Volumes** from the Inventory window you want to delete.

Right click highlighted **Volume/s** and select **Delete**, or press Delete (DEL) on the keyboard.

The **Volume Deletion** window will display the **Repositories** where the volumes to be deleted are located in the top pane and Volume-ID's in the lower pane.

If the **Volume Deletion** window is not displayed it is because you are running an outdated version of TapeMaster. Instructions to delete volumes in older versions of TapeMaster can be found [here](#)

Each row in the top pane will, along with the repository description (or ID), list the number of volumes for deletion and the delete status of either **Deletes Allowed** or **Deletes Forbidden**.

For any repository listed with a status of **Deletes Forbidden** you must either:

- Right clicking the row and selecting Allow to change status to **Deletes Allowed**
- Right clicking the row and selecting Remove to remove the volumes before deletion of any volumes located in a repository with **Deletes Allowed** status.

Select the [Volume/s](#) to be deleted and click Delete Volumes.

Click Yes to the delete confirmation to delete the [Volumes](#).

As deleting volumes is permanent, clicking No to the delete confirmation is your last opportunity to

cancel the delete function.

When a volume is deleted its historical entries remain in the database. If a deleted Volume is added back in to the database, all previous history records including when deleted and added back, are listed under that volumes History tab.

Edit Volume: 000000L5

Help

When a **Volume** is deleted its historical entries remain in the database. If a deleted **Volume** is added back into the database, all previous history records including when deleted and added back, are listed under that **Volumes** History tab.

As setting **Repository** to **Allow Deletes** alters the properties of that **Repository**, if required, reset the **Repository** to **no deletes** by right-clicking the required **Repository**, selecting Properties and change the Allow Deletes field in the Options tab to false.
