Restricting Which Volume-ID's Can Be Moved To A Repository.

TapeTrack allows the restriction of what volumes can be moved to a repository based on a pattern specified in the Repository properties.

Setting Volume-ID Restrictions

Open the required repository's properties and navigate to the `Options` tab.

Click in the field to the right of `Allowable Volume-ID's` and enter allowable volumes string pattern.

Restricting volume-ID patterns can be enforced using TapeTrack string filters.

Character filters may be used alone or in combination to achieve the restricted volume-ID pattern required
