Set Volume Slot Manually

Prerequisites

Target Repository must have an active Zone with vacant Slots available.

Volume must be in a move to, or currently at, the Repository into which it is to be Slotted.

Setting Slot For Volumes In A Move To Or At Repository

Right click the required Volume and select `Properties`.

Open the `Target Repository` tab.

Under `Virtual Location` click in the '"Slot `field and then click the ... button to open the` Slot Allocation `window. Click on the required unallocated Slot and then click OK to assign the Volume to that slot. Click` Save '' on the Volume Properties window to save the Target Slot data.
