

Setting Environmental Variables

The default behaviour of TapeTrack programs can be changed by setting environmental variables.

These variables can be set using the following methods.

Windows Command Line

```
<sxh plain;> set VARIABLE=VALUE </sxh>
```

Where VARIABLE is the variable name, and VALUE is the variable value.

Linux Shell

To set an environmental variable in the Linux operating system, use the export command.

```
<sxh plain;> export VARIABLE=VALUE </sxh>
```

Where VARIABLE is the variable name, and VALUE is the variable value.

You can also prepend the variable to the command.

```
<sxh plain;> TMSSREPORTFORMAT=CSV TMSS10Inventory </sxh>
```

TapeTrack Config File

The TapeTrack Config File that is loaded when each Desktop and Command Line Program is initiated, it can also be used to set [environmental variable](#).

```
<sxh plain;>
```

```
variables = {  
    TMSSLEVELNAMES = "A,B,C";  
    TMSSNOLEVELSLOT = "1";  
};
```

```
</sxh>
```
