

# Transferring files via SFTP

## Linux

The Linux `sftp` command does not provide an argument to specify a password. If you do not want to configure keys for the transfer, you can install the `sshpass` program.

```
<sxh bash;> yum install sshpass </sxh>
```

```
<sxh bash;> sshpass -p "password" sftp -v user@server.tapetrack.com «< '$cd upload\n put  
drm.csv\n ls -al' </sxh>
```
