# Transferring files via SFTP

## Linux

### Using TMSS10SFTP

The TMSS10SFTP program is installed by default with the TapeTrack Command Line Programs for Linux.

This program provides more automation that the native `sftp` command and is able to automatically select the newest file in a directory.

This comes in handy when downloading files from Iron Mountain as they only provide time-stamped files requiring the user to know the name of the file to be downloaded in advance.

Documentation for TMSS10SFTP can be found here.

### Using sshpass and sftp

The Linux `sftp` command does not provide an argument to specify a password. If you do not want to configure keys for the transfer, you can install the `sshpass` program.

<sxh text;> [root@corp-01 ~]# yum install sshpass Last metadata expiration check: 0:04:14 ago on Fri 19 Apr 2019 04:22:49 PM MDT. Dependencies resolved.

Package Arch Version Repository Size

Installing: sshpass x86_64 1.06-4.fc27 fedora 26 k

```
Preparing        :
1/1
Installing       : sshpass-1.06-4.fc27.x86_64
1/1
```

```
Running scriptlet: sshpass-1.06-4.fc27.x86_64
1/1
Verifying        : sshpass-1.06-4.fc27.x86_64
1/1
```

Installed:

```
sshpass.x86_64 1.06-4.fc27
```

Complete! </sxh>

Once `sshpass` is installed, you can call `sshpass`, pass the password and then pass the `sftp` command string as an argument.

To specify multiple command strings you can either pass a file fill of commands, or you can use the bash here-string syntax.

<sxh text;> [root@corp-01 ~]# sshpass -p “password” sftp user@server.tapetrack.com «< “put drm.csv upload/drm.csv” Connected to server.tapetrack.com. sftp> put drm.csv upload/drm.csv </sxh>

## Windows

Windows users wanting to send files via SFTP can use the TMSS10SFTP command (installed as part of the TapeTrack Server Utilities package), or a third-party program such as https://winscp.net/eng/index.php.
