

Running Syncs with inotifywait

```
<sxh bash;> #!/bin/bash
```

```
function control_c {
```

```
    logger -s -t TapeTrackSyncWatcher Request to end TapeTrack Sync Watcher
    recieved
    exit

```

```
};
```

```
set -e
```

```
trap control_c SIGINT trap control_c SIGTERM
```

```
logger -s -t TapeTrackSyncWatcher Starting TapeTrack Sync Watcher
```

```
outfile=$(mktemp "${TMPDIR:-/tmp/}syncwatch.XXXXXXXXXXX")
```

```
while true; do
```

```
    #
    # Wait on a change to the sftp directory
    #
    inotifywait -r -e close_write /var/sftp > $outfile 2> /dev/null

```

```
    #
    # A chance has been made so read the results into 3 variables (path, type,
    file)
    #
    read -r r1 r2 r3 < $outfile

```

```
    #
    # Delete the temp file
    #
    rm $outfile

```

```
    base=`cut -d '/' -f-4 <<< $r1`
```

```
    if grep -q "/upload/" <<< $r1 ; then
        logger -s -t TapeTrackSyncWatcher Launching Sync fpr file $r1$r3
        now=$(date +"%m_%d_%Y")
        syncfile=$r1$r3 TMSS10Sync -d $base/etc/default.ttidef >
        $base/reports/stdout-$now.txt 2> $base/reports/stderr-$now.txt &
    else
        logger -s -t TapeTrackSyncWatcher Skipping file update for file $r1$r3
    fi

```

done

exit </sxh>
