Microsoft Visual C++ 2015 - 2022 Redistributable Runtime

While TapeTrack automatically installs the Visual C++ 2019 Redistributable Runtime during normal installation, sometimes security software may block the installation without providing any notifications to the user.

If you are presented with an error referencing a missing .dll file while trying to start TapeTrack software, manually installing the Visual C++ Redistributable 2015 - 2022 Runtime package will solve this error.

Download Runtime

The latest supported version of Visual C++ Redistributable 2019 Runtime can be downloaded from Microsoft for Windows x86, [https://aka.ms/vs/17/release/vc_redist.x64.exe|x64]] and ARM64.

Install Runtime

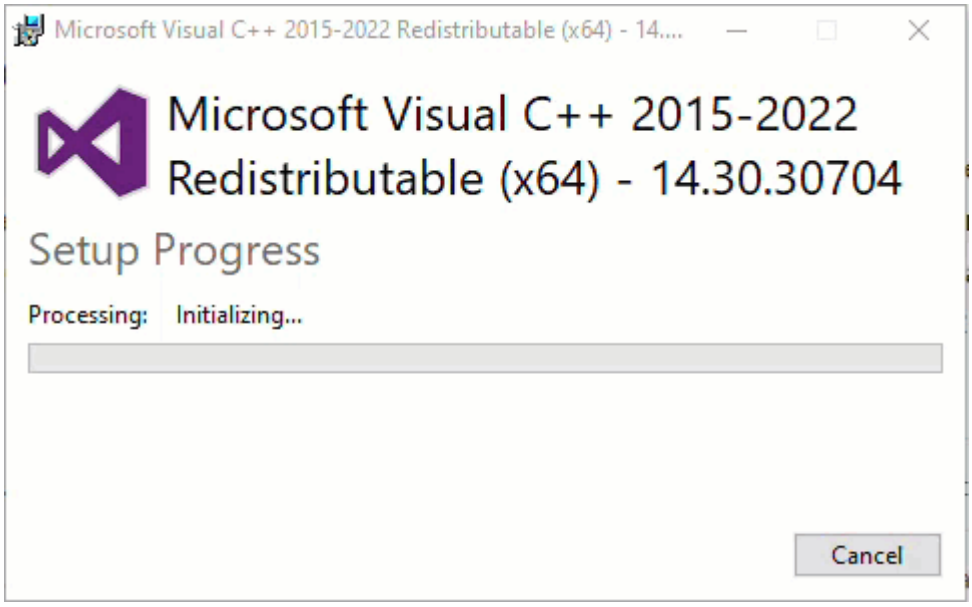

Run the downloaded executable, click `Yes` to any system popups about the executable making changes to your computer.

Read license terms and conditions, check `Agree` to enable the `Install` button.

Click Install button to continue.

The Runtime will then install on your computer.

At the end of installation when prompted, click `restart` your computer to complete the process. If you need to save other work on your computer or server, click `Close` and manually restart your computer at a convenient time to load the updated files.

Open your TapeTrack application and check that installing the Visual C++ 2019 Redistributable Runtime has solved the missing dll file issue.
