Home Slot

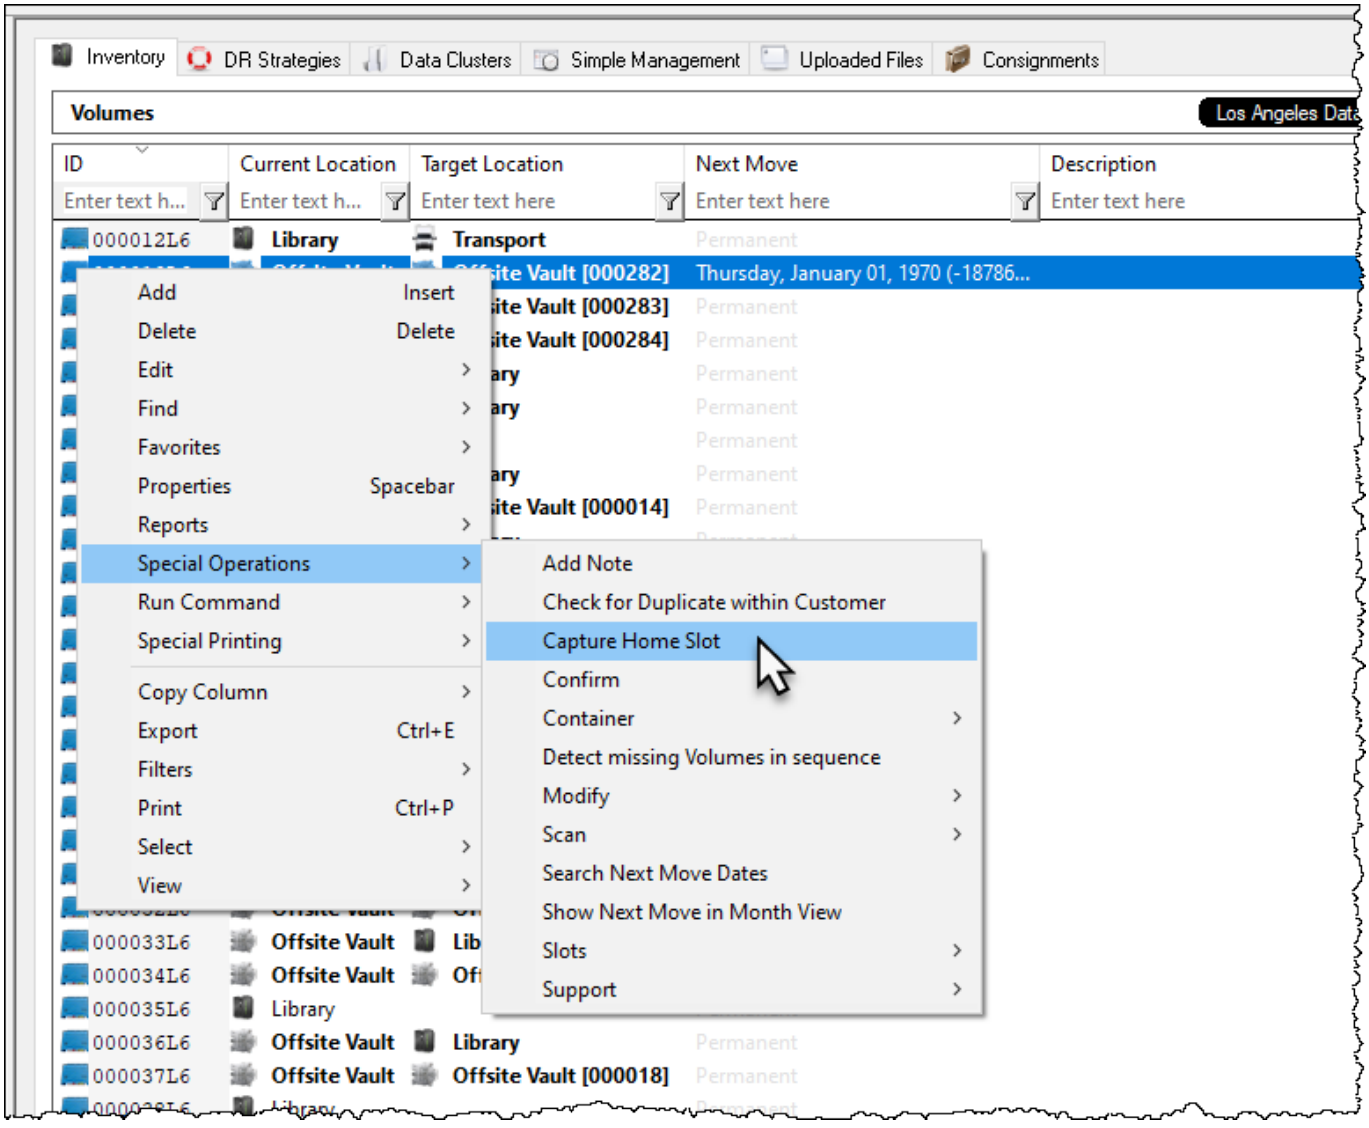

When Volumes are slotted by the Command Line Program TMSS10SlotAllocation the Slots assigned are determined by the Repository Options setting, either IntelliSlot or First Available.

Assigning a Volume with a Home Slot will have TMSS10SlotAllocation attempt to slot that Volume to its Home Slot first, if that Slot is unavailable the Volume will be Slotted according to the preset protocol.

Assigning A Home Slot

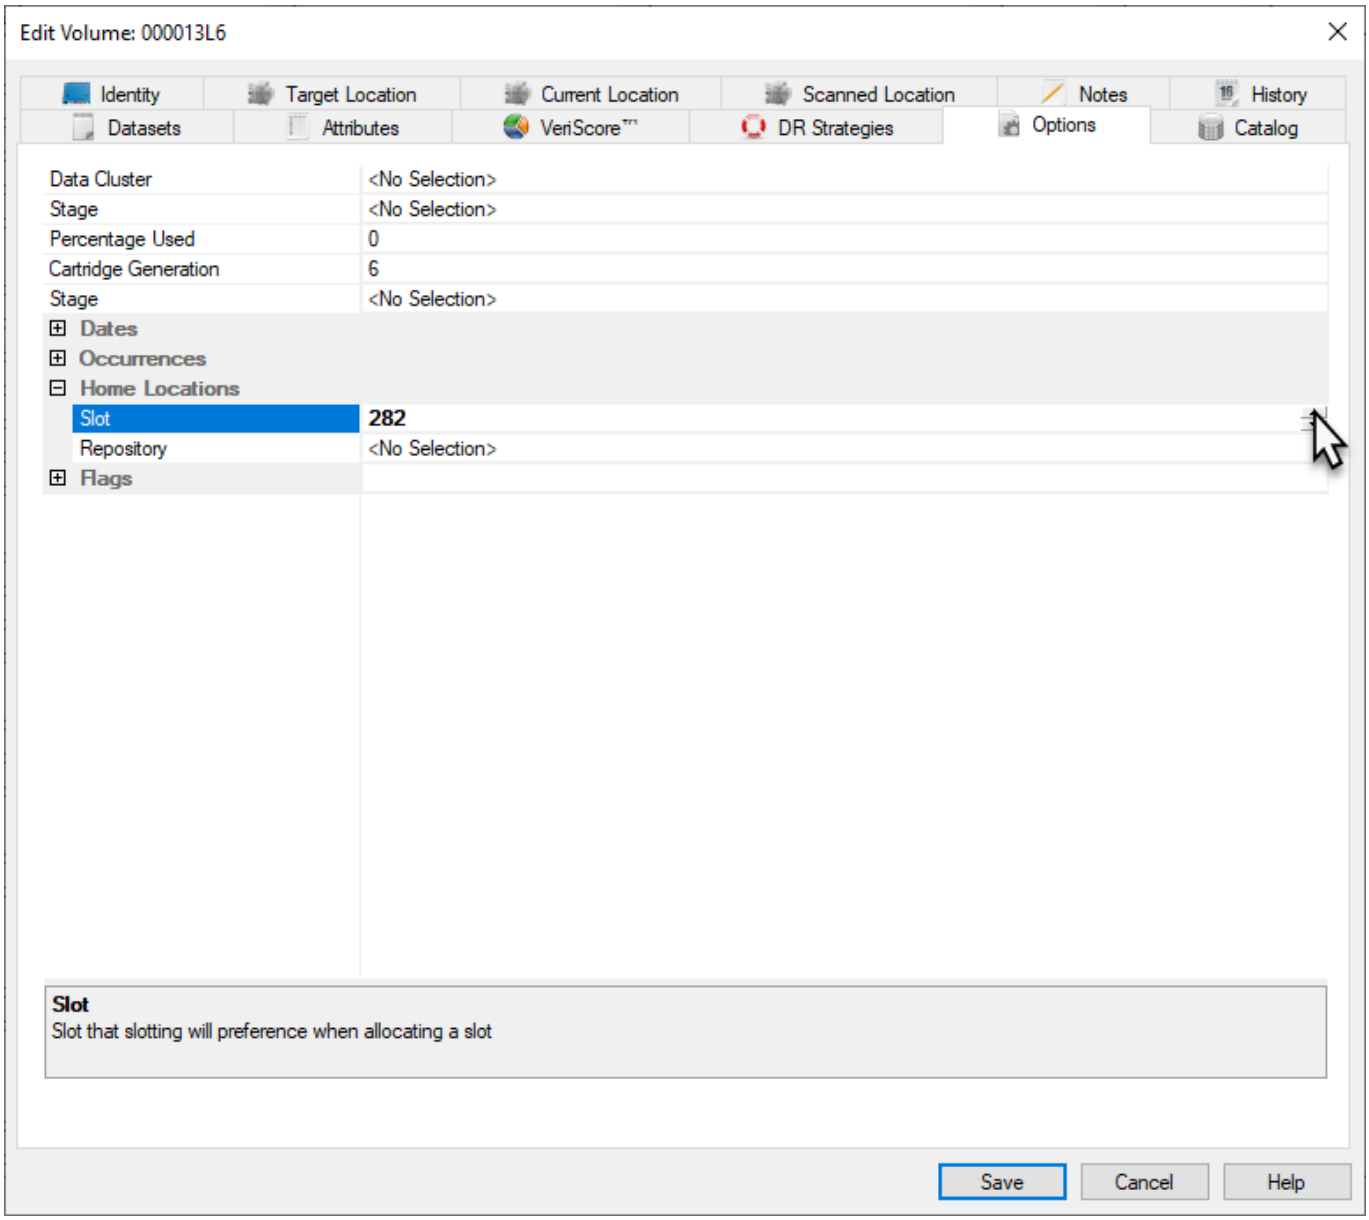

Volume Already Slotted In Required Home Slot

If the Volume is already Slotted in, or assigned (Target) to the Slot, right click on the Volume and select `Special Operations` > `Capture Home Slot`.

To assign a Volume to a Home Slot, from the Inventory window in TapeMaster:

- Right-click a Volume and select `Properties`
- Open the `Options` tab
- Expand the `Home Locations`
- In the `Slot` field, enter the required Home Slot number
- Click `Save` to update the data and close the Properties window.

If a Volume is Slotted in multiple Repositories (eg Offsite Vault and Racking), TMSS10SlotAllocation will attempt to assign it to its Home Slot in all Repositories.

update doco, home, slot
