# Troubleshooter: Slotting (New Setup)

Slotting is not enabled by default.

These are the steps required to enable slotting:

- Create or identify an existing User-ID for the slotting task to run under.
- Edit the `Slotting.bat` script located in the Scripts directory of the Framework Server Folder.
- Update the User string to reflect the User-ID that is to be used for the task.
- Schedule the script to run automatically via Windows Scheduler every 1 to 2 minutes.
- Enable the “Enable Slotting” option for the Repository that requires slotting.
- Select the “Slotting Mode” for the Repository.
- Map Zones to the Repository.
