TMSSPDFLOGOPATH

The environmental variable TMSSPDFLOGOPATH defines the fully qualified path of a JPG image that is to be used when the TMSSREPORTFORMAT specifies PDF output.

Correct path (recommended to use full path) to logo file must be used. Incorrect path will cause an error and report creation terminated

Example

<sxh> set TMSSPDFLOGOPATH="C:\Users\GazillaByte\report_logo.jpg" </sxh>
