

TMSSPDFLOGOPATH

The environmental variable TMSSPDFLOGOPATH defines the fully qualified path of a JPG image that is to be used when the [TMSSREPORTFORMAT](#) specifies PDF output.

Correct path (recommended full path) to logo file must be used. Incorrect path will cause an error and report creation terminated

Example

```
<sxh> set TMSSPDFLOGOPATH="C:\Users\GazillaByte\report_logo.jpg" </sxh>
```
