TMSSSLACKURL

The Environmental Variable TMSSSLACKURL sets the URL for a Slack message to be sent to detailing the result of a script running a command line executable on a remote server.

Example

Windows Command Line

```
set TMSSSLACKURL=https://hooks.slack.com/services/your_unique_address_values
```

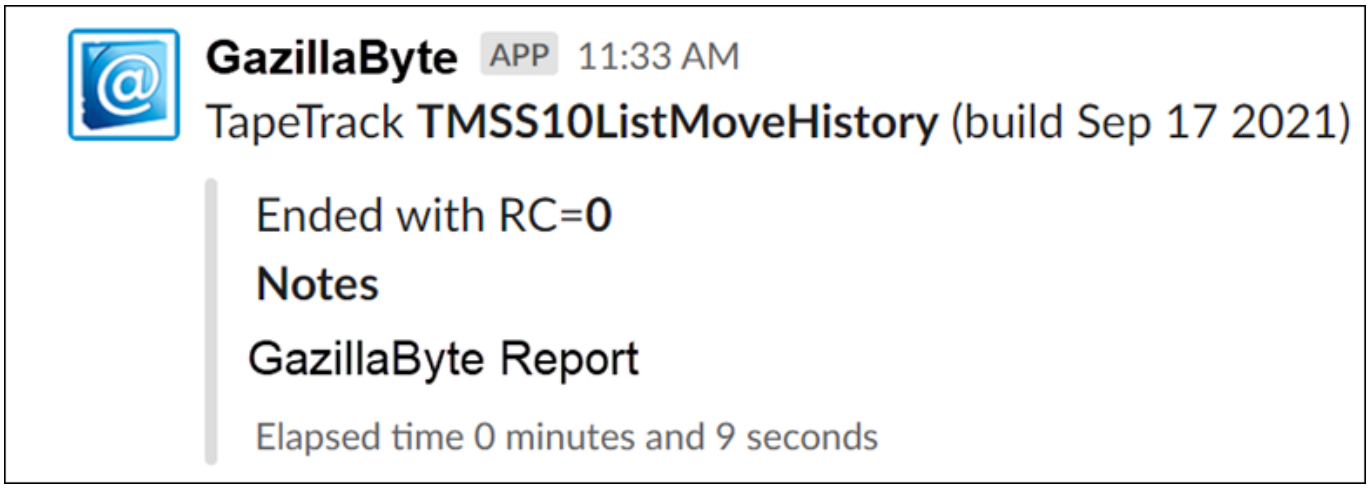

Windows PowerShell

```
$env:TMSSSLACKURL =
"https://hooks.slack.com/services/your_unique_address_values"
```

Linux

```
export
TMSSSLACKURL=https://hooks.slack.com/services/your_unique_address_value
```
