TMSSSLACKUSER

The Environmental Variable TMSSSLACKUSER allows you to add a user name or company description to the top of the Slack message to better differentiate the message origin if you have several different users set up.

Example

Windows Command Line

```
set TMSSSLACKUSER=GazillaByte
```

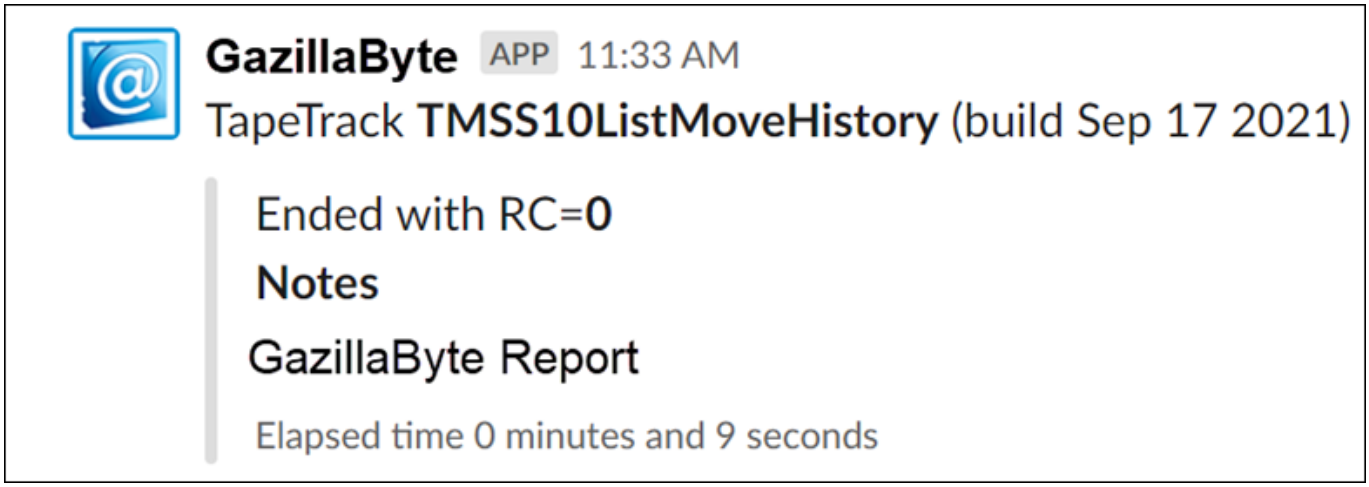

Windows PowerShell

```
$env:TMSSSLACKUSER = "GazillaByte"
```

Linux

```
export TMSSSLACKURL=GazillaByte
```

Sample Output
